

# **Client Portal Concept**

Centralized Dashboard for Project Transparency & Collaboration

## **Problem / Opportunity**

- Project updates and communications are fragmented across email, Slack, and Google Drive.
- Clients lack real-time visibility into project progress.
- Manual communication creates delays and repeated questions.

Opportunity: A centralized Client Portal can unify updates, deliverables, and feedback in one place, improving transparency and collaboration.

## Client Portal Concept - Slide 2

### Target Users & Needs

| User                 | Needs                                           | Pain Points                      |
|----------------------|-------------------------------------------------|----------------------------------|
| Client               | Project overview, file access, clear next steps | Need to ask for updates          |
| PM / Account Manager | Share updates, upload deliverables              | Time-consuming repetitive emails |
| Dev / Design Team    | Ensure deliverables reach client                | No centralized feedback          |

### Proposed Solution & MVP

A web-based Client Portal where clients can:

- View real-time project status and milestones
- Access deliverables and documents
- Track risks, blockers, and upcoming tasks
- Communicate or leave feedback

MVP Features:

- Dashboard Overview (progress, milestones, tasks)
- Documents Section (upload/download, link to Google Drive)
- Milestones / Timeline (visual tracker)
- Communication Log (comments & updates)

Future Enhancements:

- Risk & Blockers view
- Client Profile / company info

### Expected Impact & Success Metrics

| Metric                  | Target                          | Rationale                                                    |
|-------------------------|---------------------------------|--------------------------------------------------------------|
| 30% fewer status emails | Reduce repetitive communication | Based on typical agency email volume, ~1/3 emails are status |
| 40% client login rate   | Engagement & adoption           | Not all clients adopt immediately. Measure logins per active |
| 20% faster delivery     | Less miscommunication           | Centralized updates reduce wait time for feedback. Measure   |
| NPS > 8/10              | Client satisfaction             | Clients perceive improved service. Measure via NPS survey    |

## Next Steps & Open Questions

### Open Questions:

- Authentication: Google Sign-in vs custom login
- Document Storage: Google Drive integration
- Permissions: view-only vs edit
- Notifications: real-time vs email digest

### Next Steps:

1. Create low-fidelity wireframes
2. Clickable Figma prototype
3. Collect internal feedback
4. MVP build & testing
